

Difference between Residential and Commercial LED Lights

The main difference is the end cords and the gauge or wire; here are the reasons to use Residential over Commercial

- COST the Residential has 70 LED Lights per set and the Commercial are all 25 lights
- CONVENIENT Male to Female end to end connection
- EASIER thinner wire makes for easier installation
- Ends connect to other electrical decorations

Note that the Commercial LED and the Residential Sets are the same both in size, brightness, sealed and so forth; the difference is in the end to end connection and the thickness of the wire

Each Male end has outlet for connection to next set of LED Christmas Lights

Wire Spacing and Specifications for Residential LED Christmas Lights:

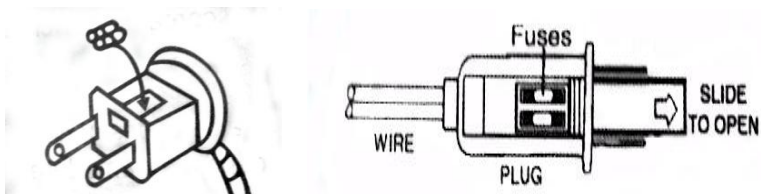

4" Spacing has 4" ends when you connect to the next set you will have aprox. 8" between the sets - distance from the first light to the very end is 7"

6" Spacing has 4" ends when you connect to the next set you will have aprox. 8" between the sets - distance from the first light to the very end is 7"

8" Spacing has 4" ends when you connect to the next set you will have aprox. 10" between the sets - distance from the first light to the very end is 7"

- 3 Amps
- 125 Volt (110V)
- 22 gauge Wire
- Male/Female End to End Connection

- UV protected - Virtually unbreakable

LED Christmas Lights Fuses are 3 AMP and are included with your LED Light Strings

- Unplug product from the receptacle
- Open the fuse cover by sliding away from the copper plug ends
- Remove the fuses carefully by turning plug over
- Replace fuse with fuses included (if used or discarded replace with a 3 Amp max fuse)

- Slide closed the fuse access cover on top of the plug

LED Christmas Lights Questions:

- This product is for seasonal use 90 Days
- How long is the warranty? 3 year from the date of purchase. Forever LED replaces for the 1st Year
- Can I use an extension cord with this product: Yes
- We have every question that has been asked including all the technology specifications click here for more Technology and Information
- What is injected Molded Sealed Sets, The Lens is molded over the LED to seal the unit and make it waterproof. Bulbs that just pull out will corrode
- Difference between Full Wave and Half Wave LED: You can click the link above for all the information but to make it short a Full Wave LED is receiving full power which makes them brighter than half wave; they also do not flicker like most of the sets on the market.

Our Light Strings are Parallel Wired so if one was to go out the rest would stay on (these are warranted defects)

LED Safety Instructions:

- 1) Read and Follow all safety instructions
